

**PETAR P.**  
**SOFTWARE DEVELOPER**  
**BULGARIA**

## SKILLS

### Core Skills

- AWS Lambda
- AWS Cognito
- AWS Api Gateway
- Effective Communication
- GraphQL
- ReactJS
- TypeScript
- AWS DynamoDB
- PostgreSQL
- Terraform
- Teamwork
- Adaptability
- JavaScript
- NodeJS

### Additional Skills

- HTML
- CSS
- Bootstrap
- SQL

## EDUCATION

### Bachelor's Degree in Software Engineering

Plovdiv University

2018 - Present

### Construction Technician Grade 3

High School of Engineering and Architecture

2013 - 2018

## CERTIFICATES

## PROFILE

Petar is an enthusiastic, hard-working, and responsible person. He is very flexible and adaptable, stays calm in stressful situations, and every challenge he encounters is motivating him to give his best.

## WORK EXPERIENCE

### Mentormate

July 2021 - Present

#### Software Developer

- Docker
- Nodejs
- PostgreSQL
- Vue.js
- Feathers.js

### Mentormate

November 2020 - June 2021

#### Software Developer

**Project:** A casino card game named Baccarat, that is developed as a business-to-business application so it can be integrated in multiple platforms (e.g. Facebook Messenger or gambling website). The game can be played as a one on one competition as well as multiplayer contest with live leader board of all participants and their performance. A custom admin portal enables customer support representatives to manage games and users.

#### Responsibilities:

- Developing a custom admin portal that supports multiple platforms. The whole connection was done with API, which was deployed in lambdas
- Developing Baccarat contest service. The service itself is a game engine that provides multiplayer functionality. The whole service is integrated with a payments service that we build for the client
- Developing live contest Leader board. The idea here was to build a live leader board that the player could preview each moment and monitor progress
- Integrating the game with other services and building a B2B platform. The platform could support additional games
- Participating in the application cloud design, lambda functions, and NoSql database design
- Resolving architecture problems in the cloud infrastructure. Participating in database design meetings and deployment strategy
- Communicating with clients and providing advice related to the whole development process.
- Integrate Cognito authentication and maintain the whole authentication layer

- TypeScript
- AWS Lambda
- PostgreSQL
- Terraform
- Express.js
- AWS Cognito
- material UI
- Nodejs
- graphql
- AWS DynamoDb
- GitHub
- ReactJS

### MentorMate

August 2020 - November 2020

#### Junior Software Developer

**Project:** MentorMate DevCamp is a highly intense training program intended to develop key technical skills in software engineering. Over a period of 6 weeks - 2 weeks to cover core/basics in software development, followed by 2 weeks to specialize in back-end technology NodeJS and another 2 weeks in front-end technology React, trainees cover new theoretical material followed by practical assignments to help them experience the real project development cycle.

#### Responsibilities:

- Developed a Social Network Web App: Small Facebook look-alike. Allows users to follow each other, create posts, look at friends' posts, comment, and like/dislike posts. Used technologies were:

- React JS
- NodeJS
- PostgreSQL
- Developed TimeSheet Web App with React JS: Small platform that allows users to create their own weekly timesheet where they specify the number of work hours spent on a specific project and its tasks

- JavaScript
- Node JS
- React JS
- PostgreSQL

**Code Coda Ltd.**

**February 2020 - March 2020**

#### **Software Intern**

**Project:** Internship Training Program for improving overall technical skills, learning different technologies, and using proven design patterns. Real - work experience with an internship project for developing a website in a team with other interns.

#### **Responsibilities:**

- Created the Front-End architecture and business logic
- Fixed bugs
- Vue JS
- Vuex
- Axios
- Docker
